Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A surveillance system for watching objects, comprising:

a camera unit for transforming an image <u>indicative of said objects</u> into an image signal and outputting said image signal, and;

a display unit having a screen and operative to transform into an image said image signal outputted by said camera unit to display said image into an image to be displayed on said screen; said camera unit being operative to automatically chase an object as a chasing target to have said display unit display said object as said chasing target, said display unit including marker displaying means for displaying a marker on said screen, and chasing target determining means for determining said object spaced apart from said marker at a predetermined distance as said chasing target among said images selecting as a chasing target one object from among said objects displayed on said screen by determining whether or not said marker is positioned on said screen in predetermined relationship with said object to be selected as said chasing target;

a joystick operative to be inclined at its desired angular positions to output position signals respectively responsive to said desired angular positions;

signal controlling means for receiving said position signals outputted by said joystick, said controlling means being operative to assume two controlling states consisting of a first controlling state to control said driving operation of said camera unit, and a second controlling state to control said movement of said marker on said screen in response to said position signals to ensure that said marker is positioned on said screen in predetermined relationship with said object to be selected as said chasing target; and

setting means for having said signal controlling means selectively assume said first and second controlling states, wherein

said camera unit is operative to automatically chase said object selected as said chasing

target to ensure that said object selected as said chasing target is displayed on said screen.

2. (Original) A surveillance system as set forth in claim 1, in which said marker is

constituted by a pointer, and said chasing target determining means is operative to

determine said object superimposed by said pointer as said chasing target among said

images displayed on said screen.

3. (Cancelled)

4. (Currently Amended) A surveillance system as set forth in claim 3 claim 2, in which said

marker displaying unit means is operative to display said pointer on said screen when said

signal controlling means is operative operated to assume said second controlling state to

control said movement of said pointer on said screen in response to said position signals.

5. (Original) A surveillance system as set forth in claim 1, in which said marker forms a

plurality of screen areas on said screen, and said chasing target determining means is

operative to determine said object positioned within one predetermined screen area on said

screen as said chasing target among said images displayed on said screen.

6. (Original) A surveillance system as set forth in claim 1, in which said marker displaying

means is operative to display said marker on said screen in superimposed relationship with

said object, and said chasing target determining means is operative to determine said object

on said screen in superimposed relationship with said marker as said chasing target among

said markers displayed on said screen.

7. (Original) A surveillance system as set forth in claim 1, in which said chasing target

determining means is operative to determine only one object as said chasing target to

automatically be chased when said object is displayed on said screen.
